Profile

I'm a Full Stack MERN Developer with experience building impactful projects, including a React-based Flash Delivery platform and a Smart Parking System backend using Node.js. I graduated from Hawassa University and have developed scalable web applications that deliver real value. My biggest achievements include designing efficient APIs, creating responsive UIs, and ensuring smooth integration between front-end and back-end systems. I'm driven by solving real-world challenges through technology, with strong skills in MongoDB, Express.js, React, Node.js, and Flutter.

Education

Sustainable Agriculture 08/2026 – Present
Lincoln University Missouri, United States
I am doing research on specifically introducing technology to agriculture

Computer Science 09/2022 – 10/2025
Hawassa University Hawassa, Ethiopia
Graduated with distinction

Skills

React	━━━━━	Hono	━━━━━
Tailwind (Shadcn)	━━━━━	Python	━━━━━
RAG	━━━━━	Node/Express JS	━━━━━
Django	━━━━━	Next Js	━━━━━
Flutter	━━━━╌	Nest Js	━━━━╌
React Native	━━━━╌	Fast API	━━━━╌

Work

A and B consultancy 02/2026 – 08/2026
Senior Full-Stack Developer Addis Ababa, Ethiopia

- Contributed to the development of a B2B car dealership platform, a charity website, and a property management website.
- Gained practical experience building web applications using Next.js, Hono, Django, and NestJS.
- Worked with shadcn/ui to develop user interfaces.
- Developed hands-on skills in cloud services and application deployment using AWS S3, AWS Lambda, Hostinger, Dokploy, and Coolify.

Internship

Full Stack Developer 12/2025 – 01/2026
Muyalogy Addis Ababa, Ethiopia

- Contributed to building a full ERP system from scratch using Next.js and Hono.
- Developed frontend features with Next.js and backend APIs with Hono.
- Worked with Cloudflare's S3-compatible storage for file storage and OpenAPI for API specifications and documentation.

Mid-Level Developer 11/2024 – 12/2024
Abugida Robotics Addis Ababa, Ethiopia

I worked on a project where I connected an Arduino device to a Flutter mobile application via Bluetooth using an Bluetooth module and the flutter bluetooth serial package. I programmed the Arduino to collect temperature sensor data and control a fan and heater, sending their statuses to the app in real time.

On the Flutter side, I designed a responsive UI that displayed the average, minimum, and maximum temperature values, along with the fan and heater status. I debugged data parsing issues, and optimized the app to remain responsive as new data came in.
