Profile

I'm a Full Stack MERN Developer with experience building impactful projects, including a React-based Flash Delivery platform and a Smart Parking System backend using Node.js. I graduated from Hawassa University and have developed scalable web applications that deliver real value. My biggest achievements include designing efficient APIs, creating responsive UIs, and ensuring smooth integration between front-end and back-end systems. I'm driven by solving real-world challenges through technology, with strong skills in MongoDB, Express.js, React, Node.js, and Flutter.

Education

Computer Science 09/2022 – 10/2025
Hawassa University Hawassa, Ethiopia
Graduated with distinction

Skills

React		HTML, CSS, Tailwind	
JS		Node	
Next Js		Flutter	

Internship

Junior Developer 12/2025 – Present
Muyalogy Addis Ababa, Ethiopia
I am contributing to the development of a comprehensive ERP web application using Next.js for the frontend and Hono for the backend API. And also incorporating various services like Drizzle ORM for efficient database management.

Junior Developer 11/2024 – 12/2024
Abugida Robotics Addis Ababa, Ethiopia
I worked on a project where I connected an Arduino device to a Flutter mobile application via Bluetooth using an Bluetooth module and the flutter bluetooth serial package. I programmed the Arduino to collect temperature sensor data and control a fan and heater, sending their statuses to the app in real time.

On the Flutter side, I designed a responsive UI that displayed the average, minimum, and maximum temperature values, along with the fan and heater status. I debugged data parsing issues, and optimized the app to remain responsive as new data came in.
